

Beyond 21st CENTURY AGRICULTURE INSIGHT

Calving and Breeding Time

Supplement the herd with protein, energy, vitamins, and minerals before calving and through breeding has been research-proven to improve a cow's body condition and conception rates and, in turn, overall calf health and survival rate making this a critical time for supplementation.

Supplementation with COWBOS not only meets the cow's needs, but also helps her maintain body condition during pregnancy and post-calving. A cow in good body condition can lactate, cycle and get bred at the beginning of the next breeding season. Supplementation protein also provides high-quality colostrum and milk to help the newborn calf get off to a good start.

Minerals play a vital role in the reproduction cycle. To support the cows post-calving and to prepare for breeding, she needs calcium, phosphorus, magnesium, copper, selenium, and zinc at least 60 days prior to calving and through the breeding season. COWBOS formulated with MINTREX chelated minerals pass unscathed through the rumen, eventually entering the small intestine where they are absorbed and utilized by the animal.

COWBOS Formulated for Calving and Breeding

- * Improve Body Condition
- * Support Fetal Development
- * Tighter Calving Interval
- * Increase Colostrum & Milk Production
- * Mintrex Chelated Minerals
- * Improve Calf Vigor
- * Quicker Breeding

IT'S A NEW DAY

Aqua-Yield® introduces the smallest innovation in agricultural history.

Aqua-Yield's® Enhanced NanoShield Delivery™ (END) improves crop nutrient uptake, increases yield, decreases inputs and enhances the sustainability of soil. Aqua-Yield's patented line of products are used on crops across the United States and in countries throughout the world. Regardless of crop, climate or chemistry, The END by Aqua-Yield drives results where it matters, the farmers bottom line.

Aqua-Yield® is making more than an initial splash in the US agricultural industry. The company Aqua-Yield® is making more than initial splash in the US agriculture industry. The company literally invented a process using the “smallest innovation” in the agriculture industry, with its patented Aqua-Yield® Process and NanoShield technology. We are the nano fertilizer company. Aqua-Yield® was founded and funded by farmers for farmers. Aqua-Yield® has deep addition to the crops and growers that we serve, all of us at Aqua-Yield® are stewards to the environment and know that Aqua-Yield® technology will aid in the worldwide pressures we face in the fertilizer company.
